

Dyego A. Costa

SOFTWARE ENGINEER

Ceará, Brazil - UTC-3

(+55) 85-99713-0901 | w@dyego.email | dyego.engineer | dyegoaurelio | dyegoaurelio

Skills

DevOps	AWS - Docker - Azure - GitHub Actions - Heroku - Vercel
Programming	Python - Typescript - Javascript - Bash
Back-end	Express.js - Flask - Django - FastApi - MySQL - PostgreSQL - MongoDB
Data Science	Pandas - Power Bi

Summary

Full-stack engineer with 5+ years building production web applications using TypeScript, Go, and Python. Currently building AI-enhanced product features serving a 100K+ product catalog at Perkup, integrating OpenAI and Gemini APIs for automated data enrichment and categorization. Open-source maintainer of nixfmt (official Nix formatter) and contributor to Servo browser engine, with a strong testing discipline and a track record of shipping across the full stack.

Experience

Perkup

Remote (United States)

SOFTWARE ENGINEER

May. 2024 - Present

- Own and maintain a 100K+ product catalog aggregating data from multiple providers; optimized data sync pipelines and reduced catalog page load time by 50%.
- Built AI-powered product enrichment using OpenAI and Gemini APIs, automatically enhancing product descriptions and images when provider data is insufficient, and implementing automated product categorization across the entire catalog.
- Developed product customization features using Express.js on Google Cloud Run and a React frontend, enabling customers to attach custom artwork to products for on-demand and bulk printing.
- Led a security hardening initiative across the platform, strengthening authentication flows, database access controls, and service-level authorization.
- Established backend coding standards for error handling and structured logging in Go and Typescript; conduct daily code reviews.
- Built analytical queries and automated reports using Google BigQuery to support data-driven product and business decisions.

PublicSquare

Remote (Canada)

SOFTWARE ENGINEER (SOLE ENGINEER)

Jun. 2023 - May 2024

- Sole engineer at an early-stage startup, owning the entire technical stack: React/Next.js frontend, Node.js and Python/FastAPI backend, MongoDB, and AWS/Heroku/Vercel infrastructure.
- Built AI-powered tools using OpenAI API, including a PDF summarizer and an adaptive lesson generator that created personalized educational curricula based on students' individual interests.
- Designed and deployed a microservices architecture using Python/FastAPI and Node.js/Express, with automated CI/CD pipelines via GitHub Actions.
- Translated wireframes into responsive, pixel-perfect web interfaces using TypeScript, React, and Next.js, collaborating directly with the designer and CEO.
