

Dyego A. Costa

FULL-STACK SOFTWARE ENGINEER

Ceará, Brazil - UTC-3

📞 (+55) 85-99713-0901 | ✉️ w@dyego.email | 🏠 dyego.engineer | 📱 dyegoaurelio | 🌐 dyegoaurelio

Summary

Full-stack engineer with 5+ years building production web applications using TypeScript, Go, and Python. Currently building AI-enhanced product features serving a 100K+ product catalog at Perkup, integrating OpenAI and Gemini APIs for automated data enrichment and categorization. Open-source maintainer of nixfmt (official Nix formatter) and contributor to Servo browser engine, with a strong testing discipline and a track record of shipping across the full stack.

Experience

Perkup

Remote (United States)

SOFTWARE ENGINEER

May. 2024 - Present

- Own and maintain a 100K+ product catalog aggregating data from multiple providers; optimized data sync pipelines and reduced catalog page load time by 50%.
- Built AI-powered product enrichment using OpenAI and Gemini APIs, automatically enhancing product descriptions and images when provider data is insufficient, and implementing automated product categorization across the entire catalog.
- Developed product customization features using Express.js on Google Cloud Run and a React frontend, enabling customers to attach custom artwork to products for on-demand and bulk printing.
- Led a security hardening initiative across the platform, strengthening authentication flows, database access controls, and service-level authorization.
- Established backend coding standards for error handling and structured logging in Go and Typescript; conduct daily code reviews.
- Built analytical queries and automated reports using Google BigQuery to support data-driven product and business decisions.

PublicSquare

Remote (Canada)

SOFTWARE ENGINEER (SOLE ENGINEER)

Jun. 2023 - May 2024

- Sole engineer at an early-stage startup, owning the entire technical stack: React/Next.js frontend, Node.js and Python/FastAPI backend, MongoDB, and AWS/Heroku/Vercel infrastructure.
- Built AI-powered tools using OpenAI API, including a PDF summarizer and an adaptive lesson generator that created personalized educational curricula based on students' individual interests.
- Designed and deployed a microservices architecture using Python/FastAPI and Node.js/Express, with automated CI/CD pipelines via GitHub Actions.
- Translated wireframes into responsive, pixel-perfect web interfaces using TypeScript, React, and Next.js, collaborating directly with the designer and CEO.

Open Source

nixfmt — Official Nix Language Formatter

github.com/NixOS/nixfmt

MAINTAINER

- Maintain the official formatter for the Nix programming language; review community contributions and ensure comprehensive test coverage.

Servo Browser Engine

github.com/servo/servo

CONTRIBUTOR

- Contributed to Content Security Policy (CSP) implementation, enabling Servo to pass 4 additional Web Platform Tests (WPT).

Simple Wireplumber GUI

github.com/dyegoaurelio/simple-wireplumber-gui

CREATOR

- Built a GTK4/Python GUI for Linux audio management; 89+ GitHub stars and 10,000+ downloads on Flathub with community translations into multiple languages.

Skills

Languages	TypeScript - JavaScript - Go - Python - SQL - Bash
Frontend	React - Next.js - Redux - Vite - HTML5 - CSS
Backend	Node.js - Express - FastAPI - REST APIs - Firebase - Django
Databases	PostgreSQL - MySQL - MongoDB - BigQuery - Firestore
Infrastructure	AWS - GCP - Docker - GitHub Actions - CI/CD - Vercel
AI / ML	OpenAI API - Gemini API - LLM Integration - AI-Powered Data Enrichment
Testing	Vitest - Go Testing - Web Platform Tests

Languages

English	Fluent
Portuguese	Native
